## MECHANICS OF SOLIDS D209 SOLUTIONS 2004

1. (a) Derive from first principles, the second moment of area of a solid circular section about a diameter.

## SOLUTION

The elementary strip has a second moment of area of $\mathrm{dI}=\mathrm{by}^{2} \mathrm{dy}$ about the diameter.
$B=2 R \cos \theta \quad y=R \sin \theta \quad d y=R \cos \theta d \theta$
$\mathrm{dI}=2 \mathrm{R} \cos \theta(\mathrm{R} \sin \theta)^{2} \mathrm{R} \cos \theta \mathrm{d} \theta=2 \mathrm{R}^{4} \cos ^{2} \theta \sin ^{2} \theta$
$\mathrm{I}=2 \mathrm{R}^{4} \int_{0}^{2 \pi} \cos ^{2} \theta \sin ^{2} \theta$
$I=2 R^{4}\left[-\frac{\sin \theta \cos ^{3} \theta}{4}+\frac{\cos \theta \sin \theta+\theta}{8}\right]_{0}^{2 \pi}$
$\mathrm{I}=2 \mathrm{R}^{4}\left(\left[-\frac{\sin 2 \pi \cos ^{3} 2 \pi}{4}+\frac{\cos 2 \pi \sin 2 \pi+2 \pi}{8}\right]-\left[-\frac{\sin 0 \cos ^{3} 0}{4}+\frac{\cos 0 \sin 0+0}{8}\right]\right)$
$\mathrm{I}=2 \mathrm{R}^{4}\left(\left[-0+\frac{0+2 \pi}{8}\right]-\left[-0+\frac{0+0}{8}\right]\right)=2 \mathrm{R}^{4}\left[\frac{2 \pi}{8}\right]=\frac{\pi \mathrm{R}^{4}}{4}$ or $\frac{\pi \mathrm{D}^{4}}{64}$
The integration should be done by any method the student knows.
1 (b) A steel wire 3 mm diameter is wound onto a drum. Calculate the minimum diameter of the drum such that no permanent deformation (bending) occurs in the wire. ( $\mathrm{E}=200 \mathrm{GPa}$ and the yield stress is 400 MPa )

## SOLUTION

$\mathrm{M} / \mathrm{I}=\mathrm{E} / \mathrm{R}=\sigma / \mathrm{y} \quad$ Assuming the radius of curvature is the minimum radius then $\sigma$ is the yield stress.
$R=E y / \sigma \quad y=1.5 \times 10^{-3}$
$\mathrm{R}=200 \times 10^{9} \times 1.5 \times 10^{-3} / 400 \times 10^{6}=0.75 \mathrm{~m}$ The minimum diameter is 1.5 m
1 (c) Calculate the torque required to turn the drum assuming no friction and no tension in the wire.

## SOLUTION

The bending moment that produces the bending stress in the wire is assumed to be the torque required to turn the drum.
$\mathrm{M}=\mathrm{EI} / \mathrm{R}$
$\mathrm{I}=\pi \times\left(3 \times 10^{-3}\right)^{4} / 64=3.976 \times 10^{-12} \mathrm{R}=0.75 \mathrm{~m}$
$\mathrm{M}=200 \times 10^{9} \times 3.976 \times 10^{-12} / 0.75=1.06 \mathrm{Nm}$
